studious?

Walrus keyboard. \$899.00

bored?

Walrus plane. \$0.99

Keeping imagination alive is a vital part of being human. It grants the ability to dream, to think beyond what is possible, and to create something truly unique. Without imagination, the world would be a much duller and less creative place.

Art and AI can play a big role in keeping our imagination alive. Artistic expression has always been a way to stretch the limits of the real world, and AI is a powerful tool that can help bring even the most unusual and unrealistic ideas to life.

Images from this catalog were generated with MidJourney, combining the potentials of the two branches. Whether it's creating an unusual walrus-themed gift catalog, or bringing an otherworldly idea to life, the possibilities are endless. By fusing our imagination with the platforms of AI and art, the boundaries of what is possible will continue to be pushed.
